Prop traders

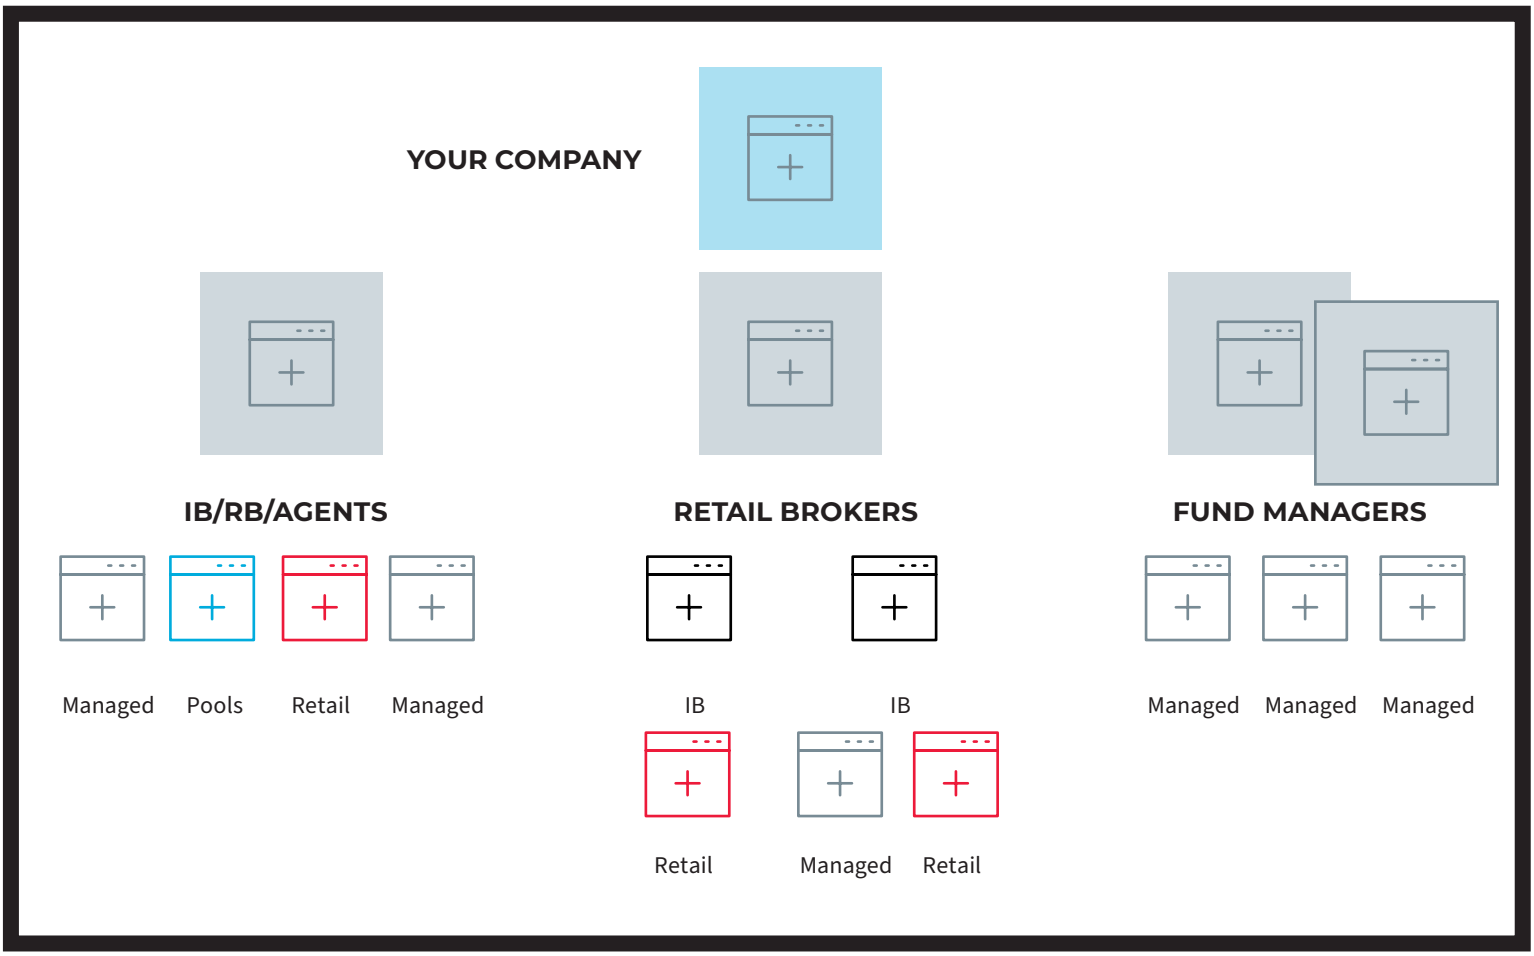
Felxibility

Set margin by instrument
Set margin by each trade group per instrument
Easy to change margins in back office via administrator login

> **All necessary tools integrated in one platform for risk management throughout the lifecycle of client‘s trade.**

Report Hierarchy

Create a multilevel report hierarchy to display aggregate data broken down by multiple dimensions.



You can set up the reporting hierarchy structure based on the roles and also assign reporting managers to users for a well-defined record accessibility.

A user is assigned a reporting manager who is privileged to view or access the user‘s data and reports. Any member who is at a higher role than the user can be chosen as the reporting manager.

Condor Price/ Liquidity Hub

Best execution

Best execution policy under MiFID adopts a multi-faceted approach that addresses, amongst other things, quality of execution, trading conditions extended to clients and the counterparty selection process. It also provides directions and guidelines on how best execution can be achieved.

Liquidity hubs

The Condor Price Hub supports different feeds through plugins, including PrimeXM, OneZero, Celera, GCEX, and other bank liquidity. It can be used for a wide variety of tasks, such as eCommerce/wholesale trading solutions, from managing credit lines and tiering prices to straight-through-processing block trades.

Easy set-up

The Condor Price Hub is flexible and integrates seamlessly with dealing desk solutions. It reduces the time to market for connecting to a new trading venue from months to less than five (5) days, lowering operational costs and freeing up human resources for both makers and takers so that they can concentrate on the core business.

> **Efficient aggregation of multiple LPs with emphasis on best execution on a consistent basis.**
